

Student ID:

Name:

- * This assignment is related to Chapter 12 (Building Energy Simulation) , and involves a research paper study discussing the perspectives on building energy simulation.
 - Korean lecture materials: Slides 25-26
 - English lecture materials: Slides 26-27
- * Two papers (one in Korean, one in English) will be provided for this assignment. Please choose and read one of them and describe your thoughts in the form of a reading report.
 - Korean research paper: Normative Assessment of Technical Building Performance
 - English research paper: Normative Thermal Comfort Assessment
- * Please focus on (1) what perspective the authors have on building energy simulation (real world vs. virtual experiment) and (2) what issues they have raised and describe your unique opinions in comparison with the authors' perspectives.
 - Please do not place heavy emphasis on specific techniques and theories introduced in the research.
 - Your unique thoughts on building energy simulation will be considered the key evaluation point (i.e., this is not an assignment that demands a single correct answer).
- * Please use either MS Word or HWP (Hancom Office), whichever is more convenient for you, and limit the length to 1 page (A4 size). Please convert your file to PDF format and submit it to eCampus.
- * This consists of 1 question (reading report), and the total score is 100 points.
